

CVN-69 Milestone 4 Project Plan

PUBLIC-REFERENCE AUDIT · PARAMETRIC RECONSTRUCTION · PRINTABILITY · FULL QA

Objective and frozen scope

- Create only publicly visible defensive systems and major deck-edge equipment compatible with immutable Milestones 1–3.
- Freeze the 2023-10-14 through 2024-07-14 deployment fit, with June 2024 visible evidence preferred.
- Build new parametric BReps; supplied STL triangles remain reference-only and never enter production geometry.
- Exclude aircraft, vehicles, ammunition, internal/functional weapon mechanisms, ocean/display systems, electronics, and final release.

Accuracy policy

- Approved datums and interfaces are dimensionally verified; system identities use official public Navy/NAVSEA evidence.
- Counts and placements are cross-image-derived and explicitly medium-confidence where a single view is obstructed.
- Launcher grids, barrel, railings, ladders, and canisters are conservatively enlarged FDM-safe representations.

Deterministic work breakdown

Stage	Outputs	Release evidence
Reference audit	Configuration_Audit.md + JSON confidence report	official URLs, dates, access date, counts, uncertainties
Parameters	weapons_deckedge_parameters.py	imports approved integration/island modules
CAD build	FCStd, STEP, STL, OBJ, 3MF	43 production objects; no STL import
Physical fit	STEP/STL/3MF coupon	actual asymmetric 0.25 mm-per-side interface
Visual review	19 renders	full ship, closeups, exploded, interface, plates
Documentation	4 PDFs + Markdown	drawings, printing, plan, glue sequence
Validation	Markdown + JSON QA	FreeCAD/BOP, STEP, STL, 3MF, interference, Bambu, SHA-256

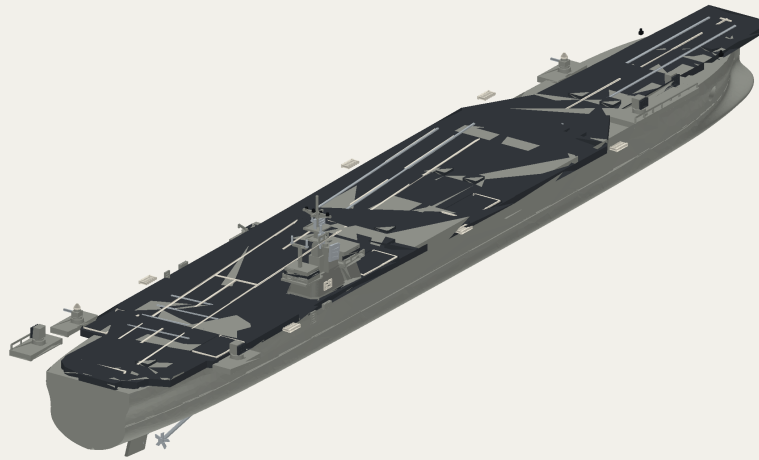

Release gate

Milestone 4 may be committed and pushed only after all required artifacts physically exist; all geometry, topology, interference, package, manifest, deterministic-rebuild, and Bambu Studio checks pass; and local main is clean and equal to origin/main. A physical coupon remains a separate real-world gate.

Change control and handoff

CVN-69 MILESTONE 4 · STERN ISOMETRIC

GLUE-ONLY DEFENSIVE SYSTEMS AND DECK-EDGE EQUIPMENT

■ Matte Ash Gray — structures ■ Matte Charcoal — launcher/boat inserts ■ Silk Silver — barrels/details ■ Matte Ivory White — domes/life rafts ■ Basic Black — light housings

- All Milestone 4 work is isolated under Project/WeaponsDeckEdge/. Approved Milestone 1–3 hashes are captured and rechecked.
- The integrated hull/deck/island/weapons STEP and 3MF are non-production review assemblies. Baseline production files are not duplicated.
- No v1.0 tag is created and the complete ship is not marked production validated.

Configured production parts: 43; weapon installations: 6; frozen period: 2023-10-14 through 2024-07-14 deployment; June 2024 visible fit preferred.
