

CVN-69 Milestone 5 — Project Plan and Accuracy Boundary

Completed objective

Reconstruct the confirmed 2023-10-14 through 2024-07-14 CVW-3 type set as new parametric FreeCAD/OpenCascade geometry, export print and review formats, and integrate layouts without changing approved Milestones 1–4.

Work packages

Package	Result
Configuration audit	Nine confirmed units/types; E-2C modeled and E-2D explicitly excluded
CAD	48 production objects; 25 major body variants
Layouts	light 16 / default 32 / full folded 36
QA	BRep, STEP, STL, 3MF, dimensions, interference, hashes, deterministic rebuild, Bambu real slices
Documentation	drawings, printing, project plan, first article, layout guide, assembly instructions

Accuracy boundary

- Official-source-derived: embarked units, aircraft types, overall length/span/rotor/dome dimensions.
- Photo-informed: major family silhouettes, folding states, canopy count, Growler pod/E-2C dome/C-2 cargo/helicopter distinctions.
- Engineering representation: folded envelopes, neutral identity tiles, print supports, exact deck parking coordinates, and nozzle-safe thickness.
- No claim is made to controlled lofts, bureau numbers, exact insignia art, weapons loads, or shipyard parking plans.

Scope stop

No hull, deck, interface, island, weapon, vehicle, ocean-base, lighting/electronics, or release-tag work is included. Physical first-article printing remains the next real-world gate.
